What is a paper straw?

Paper straws are products made from a special type of Kraft paper. Because this is a type of paper made from the pulp of a soft wood, it has the characteristics of being durable, tough, and waterproof. Therefore, this type of straw is gradually replacing plastic straws to both protect the environment and be safe for consumers' health.

PAPER STRAWS

Advantage

- + Diverse models, eye-catching consumers, not inferior to plastic straws in terms of size and color.
- + The price of this product is relatively cheap, just behind plastic straws. Therefore, this product can be widely applied and serve the needs of consumers such as business locations and households.
- + Because it is made of paper, this product has a very pleasant smell, giving consumers a feeling of cleanliness and safety, and the special thing is that this product is only used once, so it creates a lot of benefits. Feeling for customers, there is no need to worry about cleaning after use.
- + And this product after used can be decomposed or taken away for recycling, environmentally friendly.
